How companies become data-driven: A Blueprint

The importance of data for modern companies is now beyond question. The sheer volume of data that companies collect, store and structure is now growing at breathtaking speed. In such times, every company is suddenly a data company. Although the transformative potential of data is virtually unlimited, many companies still have difficulty realizing the full value of their data. So how can businesses be developed into data-driven companies?

In this presentation, Prof. Dr. Klaus Schulte, Professor of Controlling and Vice-Dean at Münster School of Business and internationally recognized data visualization expert, will present a framework that describes the critical success factors for successfully managing the transformation to a data-driven enterprise.

Prof. Dr. Klaus Schulte

Professor of Controlling at MSB | Muenster University of Applied Sciences (since 3/2010)

Vice-Dean (since 5/2013)

Tableau Iron Viz Champion (2018)

Tableau Zen Master (2019 & 2020)
